# GROW YOUR OWN

## HARDY FLOWERS FROM SEED

*It's Lots More Fun—NOW is the Best Time to Do It*

Everybody wants Perennials—and wants them in generous measure, to secure the desired effects in color and charm. If you delay and finally buy plants, the cost mounts high; an attractive Perennial border may require several hundred dollars' worth of plants.

Exactly the same result can be secured with \$10 to \$15 worth of SEEDS! And aside from the money-saving you have the fascination of growing your own plants, nursing them from the beginning, and loving them all the more! Sow your seeds *now*, and the plants will bloom next year.

## TESTIMONIALS

Does its work perfectly and pays for itself many times over.

SIEBRECHT & SONS,  
 New Rochelle, N. Y.

It is without doubt worthy of attention of both professionals and amateurs because of the ease in distributing even the smallest seeds.

F. H. BULPITT,  
 Bonnie Cliff.

It works very fine and gives a much more even distribution than the old-fashioned method by hand.

Prof. A. H. NEHLING,  
 Horticultural College, Cornell University.

It does its work almost by itself.

W. A. MANDSA,  
 South Orange, N. J.

The most practical instrument that has come to my hand. It enables one to get more uniform plants out of less seeds.

JOSEPH KOHOUT,  
 Pres. National Plant Growers' Association.

It enables us to sow seeds evenly and distributes them uniformly.

R. T. MILLER,  
 Asst. Prof. Horticulture, Massachusetts.

Prevents seedlings from crowding each other when coming up. Of great assistance to those sowing fine seeds.

Prof. A. S. THURSTON.

Schling's Winter-Flowering Sweet Peas

## Seeds of Greenhouse Plants

### 12 Wonderful New American Snapdragons for 1924

THE GREATEST ACHIEVEMENT IN SNAPDRAGONS TODAY—A NEW SIZE—  
A NEW RACE

With flowers at least one-third larger than our most vaunted Giant Snapdragons of today, flower-spikes taller and stronger, equaling those of the modern gladioli. Excellent for growing in the greenhouse where spikes attain a height of 5 to 6 feet.

## Plant a Strawberry Bed This Summer

### ENJOY YOUR OWN BERRIES NEXT JUNE

One hundred plants, with fair cultivation, will yield thirty quarts of berries the first year in a space of only 4 by 50 feet

Utilize the vacant spaces in your garden. Our Pot-grown Strawberry Plants can be set out any time during July and August, and even as late as September 15. Early plantings produce biggest crops. Set plants in rows, 1 foot apart. Allow space of 2 feet between rows for cultivation. Pinch off all runners as they appear and cover the bed lightly with leaves, salt hay, or manure in December after the ground is frozen. Remove covering in early spring; if salt hay is used it may be left between the rows as a soil-mulch to keep the soil moist and the berries clean.

### Pot-Grown Strawberry Plants

Ready for shipment July 25, but order now. Early Orders always assure Strongest Plants  
All varieties offered are perfect flowering, of largest size and best flavor

### Three Specials for the Home Garden

**PREMIER.** (Extra early.) The largest and by far the finest of all early varieties. Fruit of a brilliant scarlet-crimson color and very luscious, having a delightful aroma and a rich, wild Strawberry flavor. No variety ripens earlier. Excels all others.

**BIG JOE.** (Midseason.) An unusually healthy, vigorous, and productive variety. The berries are large, light glossy crimson, and of excellent flavor. It is one of the very best of the mid-season varieties and we cannot recommend it too highly. The color is particularly attractive.

**CHESAPEAKE.** (Late.) Possibly the finest and most luscious of all Strawberries for the home garden. The berries are very large and firm and have the luscious flavor of the wild Strawberry. The plant produces Strawberries in great quantities.

In planting the above three varieties, you will lengthen your Strawberry season considerably and have berries for fully a month.

Pot-grown plants of the above: \$2.50 for 25, \$7 per 100

**Marshall.** A very large midseason berry of rich flavor and almost devoid of acid, of a beautiful dark crimson color when fully ripe; very productive.

**Barrymore.** Midseason. Large, broad and bluntly conical; firm and of excellent quality.

**Bushel Basket.** Recognized as the largest Strawberry. The fruit is firm and of finest flavor. \$3 for 25, \$10 per 100.

**Big Joe.** Midseason. Of very high quality; succeeds and bears well in almost any soil and under all conditions, hence it is most valuable.

**Early Ozark.** Large, broad, extra-early; fruit almost square and of a rich flavor.

**Edmund Wilson.** The Giant Strawberry, introduced by Dr. Van Fleet. Very dark in color, of immense size—individual berries are often the size of a small apple. \$2 per doz., \$12 per 100.

**Schofield.** Berries of enormous size, very broad and thick, of rich aromatic flavor.

Strong pot-grown plants of any of the above, except where especially priced, \$2 for 25, \$6.50 per 100

### Fall or Everbearing Strawberry Plants

Just as luscious as the June varieties. Bearing in September and October; in fact, they fruit continuously from June until frost, but if you want a heavier crop of berries in the fall, pinch out all blossoms until about July 20 or August 1. This causes the plants to grow stocky and bear more abundantly in the fall.

**PROGRESSIVE.** We consider this the best and most productive of the fall-fruited varieties. The berries are produced in large clusters and have a fine aromatic flavor.

**LUCKY BOY.** Berries conical in shape, deep red in color, and of good flavor.

**SUPERB.** A very vigorous variety that produces quantities of fruit of fine flavor.

Strong pot-grown plants of Everbearing varieties, \$1 per doz., \$10 per 100

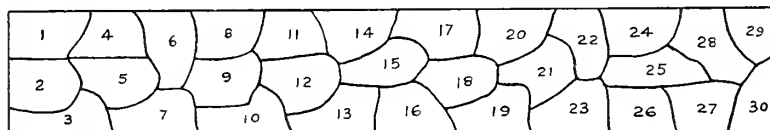

Send us your order for Pot-grown Strawberry Plants at once. We guarantee prompt shipment and satisfactory plants

Progressive Strawberries
